Rank each factor from 1 - 3 - 1 means less risk, 3 means highest.

Raven Tribal Risk Assessment

Name of Exposure pathway	Relative contaminant toxicity	Portion of people exposed	Portion of sensitive population exposed	How often exposed	How much do you get		Relative Risk (Higher number denotes higher
					How direct is pathway (1 is least direct)	How long (distance & time) is pathway (1 is longest)	risk)
Lead in smoke	2	3	3	3	3	2	16

Community Risk Assessment - Developing a Community-Based Risk Assessment for Your Tribe

1. Choose your parameters:

What things impact your tribe's well being and health in a significant way? What are the factors that relate to the well-being of the community? What issues matter when deciding whether the community's health/well-being is being affected?

- 2. Use these parameters to rank/evaluate the different risks. You can use the environmental health parameters listed in the table above and add your additional parameters to the same table. Or you can start from scratch and use just what is determined to make sense for your Tribe.
- 3. You can use 1-3 or 1-5 (or other number).
- 4. You may assign a weight if it makes sense for your community
- 5. You may also decide to not use numbers, but use I checkmarks, or words. instead

Parameters:	Weighting factor?	Health Risk #1	Health Risk #2	Health Risk #3
